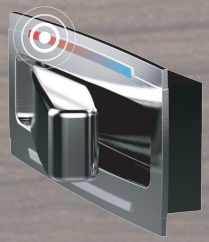
STOWABLE GALLEY FAUCET

This is the first VIP aircraft galley faucet specifically designed to meet the certification requirements and aesthetic concerns of the aviation market. The faucet is mounted on a vertical bulkhead surface to free up precious counter top space. Faucet includes patented valve and water flow controls that can easily be incorporated into a new or existing galley. Faucet comes with valves that can be connected to any user sensing device.

auto off in stowed position

electronic temperature control



touch activated surfaces

integrated user sensor
